FindCoinOnline

FindCoinOnline Plugin for Magento
v. 1.0.1
User Guide

Table of Content

Overview

The "FindCoinOnline" plugin provides facilities for Magento-built shops to keep coin and bar listings on FindCoinOnline.com always up-to-date with no additional action from the shop administrator.
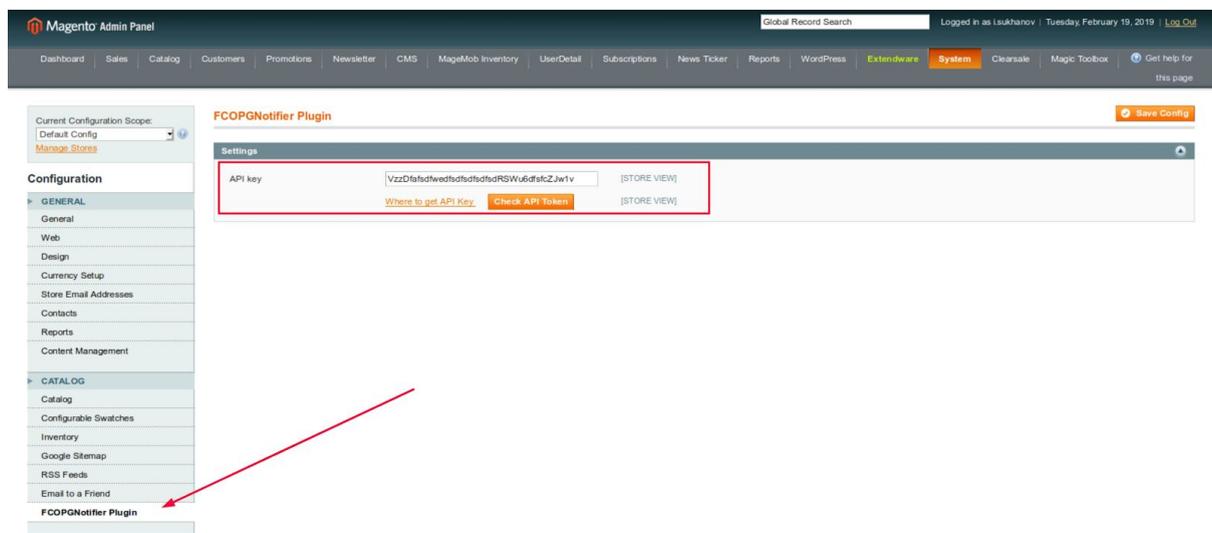

After installation the only thing plugin does is notifying FinCoinOnline.com when some of products in Magento-shop have been changed, so there is a chance for FindCoinOnline.com to grab actual information.

This plugin is supported by all shops built on Magento 1.6.x. - 1.9.x.

Installation Guide

To install the plugin you need to have it's package: Arixess_FCOPGNotifier-1.0.1.tgz, you can download it from either FindCoinOnline.com web-site or Magento directory.

1. Follow to Magento Connect and install the plugin;
2. After the plugin has been installed log out and in to the magento admin panel;
3. For further use of the plugin, follow to it's configuration section: System → Configuration → CATALOG: FCOPGNotifier Plugin;
4. Put APIKey (see below where to get API Key) and test it by pressing on "Test API Key" button. If the API Key is valid the confirmation about successful test will appear;
5. Save setting by pressing "Save Config" button.

Where to get API Key

To use "FindCoinOnline" plugin you need tu use API Key, to get it you have to pass through following steps:

1. Login into your account on FindCoinOnline.com;

2. Navigate to "Settings" section, tab "General";
3. Follow to the API Token field and press 'Copy to clipboard' icon to copy your API Key.

How to use FindCoinOnline plugin

After the plugin installation you need to do nothing anymore, all the rest of work will be done automatically. During next couple of days product listings will be published on FindCoinOnline.com and become searchable for visitors.

Every time Magento administrator makes changes to products in his store the plugin will be automatically send a notification to FindCoinOnline.com that it is necessary to update information for certain listing in the directory. If notification is successfully sent a corresponding message appears:
